RS2 Technologies

a family of access management hardware solutions

Access It!® Universal.NET TERM Option

The TERM option enables "thin client" access to Access It!® Universal.NET.

RS2 Technologies has developed a family of access management software options that can be combined to meet a wide variety of applications. All options are seamlessly integrated with Access It!® Universal.NET for maximum flexibility and ease of use.

TERM "Thin Client" Option

The TERM option is a simple, easy-to-deploy and easy-to-support thin client option. It utilizes Windows Terminal Server or Citrix Metaframe Servers to provide access to Access It!® Universal.NET without requiring client software.

The TERM option leverages existing corporate infrastructure and helps standardize desktop deployment and support. System downtime is minimized due to a single point of software installation and maintenance. Concurrent client licensing means more application availability to a larger number of users for less cost. TERM is a system-wide (i.e., server-based, not client-based) option, so only one license is needed per system.

Technical Specifications

Windows Terminal Server support

Citrix Metaframe Server support

Concurrent client licensing model

Unlimited clients (requires CLIENT option licenses)

Single, central point for software installation and upgrades

Easy software version synchronization and compliance

"Thin client" lowers bandwidth requirements

Highly secure client connections

Full client functionality

The TERM option includes these features:

• Windows Terminal Server and Citrix support

• "Thin client" requires no software installation

• Centralized server-based software updates

• Easy to deploy and support

• Reduced application downtime during upgrades

• Lower total cost of ownership

• Low bandwidth requirements

• High application stability and availability
